What Do We Do?

You're invited to participate in a study to assess whether a medication can be used to augment the recovery process after stroke. We aim to determine if the combination of Maraviroc and home-based rehabilitation therapies will lead to better arm and leg function.

As part of your participation you will be provided wearable equipment to track your progress in the home.

Duration

6 Months

Eligibility

You may be eligible for this study if you:

- Are between 30-86 years old.
- Have had a recent stroke resulting in weakness on one side of your body.
- Can walk at least 10 steps with or without assistance.

How Much Does It Cost?

Free of Charge
