Have you had a stroke?

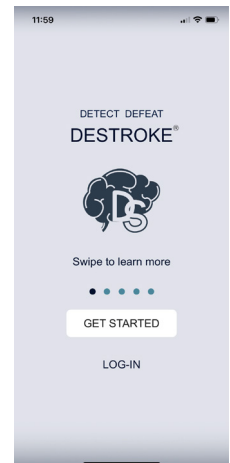

This research study is being done to assess the ability of a smartphone app to monitor stroke symptoms and detect signs of a stroke. Participants will have one neurological examination with a study doctor remotely (using Zoom), and then will complete eight more neurological examinations using the app over the next four weeks. This is a virtual study, so all visits and procedures will be conducted over video conference or using the app.

Eligibility criteria

You may be eligible for this study if you:

- Have had a stroke in the past
- Have access to an iPhone

This study is being done in collaboration with Dr. Evan Noch, founder of Destroke®, Inc., the company that is developing this application.
